submitted to the EMBL Data Library, January 1998
A.Description: Genomic sequence for Arabidopsis thaliana BAC F2401.
A.Refearence number: Z14211
A.Accession: T01440
A.Status: translated from GB/EMBL/DDBJ

Artitle: Characterization of a novel member of the macrophage mannose receptor type C A; Reference number: 22235; MUID:96355501; PMID:8702911
A; Accession: 142710
A; Ascatus: preliminary; translated from GB/EMBL/DDBJ
A; Molecule type: mRNA
A; Residues: 1-1479 < WUK>
A; Residues: 1-1479 < WUK>
C; Superfeamily: phospholipase A2 receptor; C-type lectin homology; fibronectin type II C; Keywords: membrane protein; receptor
F; 186-227/Domain: fibronectin type II repeat homology < 2FR>

WPI; 2004-430095/40. N-PSDB; ADOS7500 New composition comprising mouse truncated hairless protein-human interacting partner protein or nucleic acid complexes, useful for screening test compounds that inhibit or enhance hair growth.

Example 1; SEQ ID NO 93; 60pp; English

The invention relates to a composition comprising a mouse truncated balitiess (HTL) protein-human interacting partner protein or nuclaic acid complex. The human interacting partner protein comprises a molecule selected from ubiquitous receptor UR, MAPIA, KIAA0930 protein, monocytes antigen CD14, aphingolipid activator protein, beta-synuclein, C11 protein, vesicle-associated membrane protein 2, aldolase A, CGI-106 protein, hypothalamus protein HSMNP1, alpha enolase, POM-2P3, quinone

oxidoreductase, pumilio 1, VPS41, KIAA0614 protein, splicing factor CC1.4, ubiquitin, beta-mannosidase. Also described are: methods of assaying a test compound for agonist or antegonist activity for the above composition; and methods of inhibiting or increasing hair growth on a surface in a subject. The present sequence represents a hairless protein interacting partner used in the composition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                99

                                                                                                                                                                                                                                                                 acid molecules (HR) encoding such polypeptides. The invention also relates to the Hairless expression constructs which may be used in transcription assays. Sequences of the invention are used in diagnosis and treatment of dermatological conditions such as hair loss. They are also used in gene therapy. Polynucleotides of the invention can be used as probes for the detection of hair loss. The present sequence is mouse Hairless protein (Hr)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SHCSHRLCVACGRIAGAGKNREKTGSQEQHTDDCAQEAGHAACSLILTQFVSSQALAELS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a human hairless (HR) polynucleotide encoding the hairless (Hr) polypeptide. The invention also relates to an expression construct which produces a polypeptide with hairless transcription factor activity, a reporter construct comprising a transcription factor activity, a reporter construct comprising a transcription regulatory region responsive to construct comprising a transcription of the reporter construct comprising a transcription activity to regulatory region responsive to comparable to be transcription activity to regulate transcription of the reporter constructs being the transcription regulatory region and methods of screening for chemical agents which modulate hairless-mediated constructs. The polymucleotide is useful as a probe or primer to the airless activity. The polymucleotide is useful as a probe or primer to constitute cognate RNA and DNA within cells, which can be subsequently cased to correlate hair growth or loss with hairless expression or hairless regulated transcription. The amino acid sequence of hairless antigen can be used for preparing specific binding molecules (e.g. corplyclonal or monoclonal antibodies) for monitoring protein expression, for affinity purification and for functional studies. The human hairless colynucleotide, polypeptide or specific binding molecule may be used to dentify, isolate and detect this genetic marker in family pedigrees, radiation chybrids or human-rodent somatic cell hybrids, and as an affinity tag to dentify, isolate and detect interacting proteins that bind the hairless gene or protein. This sequence represents a mouse hairless polypeptide of

The invention relates to a human hairless (HR) polynucleotide encoding the hairless (Hr) polypeptide. The invention also relates to an expression expression system compitation an expression construct which produces a polypeptide with hairless transcription factor activity, a reporter construct comprising a transcription factor activity, a reporter construct comprising a transcription regulatory region responsive to hairless transcription activity to regulate transcription of the reporter gene which is mediated by the transcription regulatory region and methods of screening for chemical agents which modulate hairless-mediated transcription, binding between hairless and thyroid hormone receptor or hairless activity. The polynucleotide is useful as a probe or primer to quantitate cognate RNA and DNA within cells, which can be subsequently used to correlate hair growth or loss with hairless expression or hairless-regulated transcription. The amino acid sequence of hairless antigen can be used for preparing specific binding molecules (e.g. polyclonal or monoclonal antibodies) for monitoring protein expression, confernity purification and for functional studies. The human hairless columnan-rodent somatic cell hybrids, and as an affinity tag to identify, isolate and detect interacting proteins that bind the hairless channer or protein. This sequence represents a rat hairless polypeptide of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     994
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             9
                                                                                                                                                                                                                                                                                                                                                           The invention relates to human Hairless (Hr) polypeptides and nucleic acid molecules (HR) encoding such polypeptides. The invention also relates to the Hairless expression constructs which may be used in transcription assays. Sequences of the invention are used in diagnosis and treatment of dermatological conditions such as hair loss. They are also used in gene therapy. Polymucleotides of the invention can be used as probes for the detection of hair loss. The present sequence is rat Hairless protein (Hr)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            HGFRLFQEHWRQGQPVLVSGIQKTLRLSLWGMEALGTLGGQVQTLTALGPPQPTSLDSTA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                acid molecules (HR) encoding such polypeptides. The invention also treates to the Hairless expression constructs which may be used in transcription assays. Sequences of the invention are used in diagnosis and treatment of dermatological conditions such as hair loss. They are also used in gene therapy. Polynucleotides of the invention can be used as probes for the detection of hair loss. The present sequence is human Hairless protein
                                                                                                                                                                                                                                  of

The invention also relates to an expression system comprising an expression construct which produces a polypeptide with hairless transcription factor activity, a reporter construct comprising a transcription factor activity, a reporter construct comprising a transcription factor activity a reporter construct comprising a transcription regulatory region and methods construct comprising activity to regulatory region and methods construct binding between hairless and thyroid hormone receptor or hairless activity. The polynucleotide is useful as a probe or primer to quantitate cognate RNA and DNA within cells, which can be subsequently consed to correlate hair growth or loss with hairless expression or hairless regulated transcription. The amino acid sequence of hairless antigen can be used for preparing specific binding molecules (e.g. antigen can be used for preparing specific binding molecules (e.g. colyclonal or monoclonal antibodies) for monitoring protein expression, cor affinity purification and for functional studies. The human hairless coldentify and detect this genetic marker in family pedigrees, radiation chybrids or human-rodent sommatic cell hybrids, and as an affinity tag to dence the protein that bind the hairless construction. This sequence represents a human hairless polypeptide of the protein that the hairless construction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New Hairless polypeptide and polynucleotide, useful for identifying and detecting this genetic marker in family pedigrees or human-rodent somatic cell hybrids, or detecting interacting proteins that bind hairless gene
                                                                                                                                                                                                                                          Human, hairless; Hr; thyroid hormone receptor; hair growth; hair loss; family pedigree; radiation hybrid; somatic cell hybrid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    DB 6; Length 1189;

This is the amino acid sequence for the wildtype human hairless protein. The gene was discovered by genotryping a Paristani kindred (comprising of a ffected males and 7 affected females) with an inherited form of congenital alopecia universalis. The pedigree is strongly suggestive of autosomal recessive inheritance. The invention provides methods and sequences for the recombinant production of wild-type human hairless, mutant human hairless and wild-type human of winged-helix-nude) proteins, assays for screening for binding compounds, modulators and homoloques, and animal models of hairlessenses. Human hairless conditions such as androgenetic alopecia (male pattern baldness), alopecia areata, alopecia totalis, congenital alopecia universalis, congenital alopecia and severe T-cell immunodeficiency can be treated with compounds identified in the assays. The methods are also useful for identifying compounds that can be used to inhibit hair growth
                                                                                                                                                                                                                                                                                                                                                                           alopecia, congenital alopecia; congenital atrichia; androgenetic alopecia; alopecia areata; alopecia universalis; wildtype;

                                                                                                                                                                                                                               This is the amino acid sequence for the mutant human hairless protein, which has Alanine substituted for Threonine at position 1022. The gene was discovered by genotyping a Pakistani kindred (comprising of 4 affected males and 7 affected feamles) with an inherited form of congenital alopecia universalis. The pedigree is strongly suggestive of autosomal recessive inheritance. The invention provides methods and sequences for the recombinant production of wild-type human hairless, mothlators and sequences for screening for binding compounds, modulators and homologues, and animal models of hairlessness. Human hairless conditions such as androgenetic alopecia (male pattern baldness), alopecia areata, alopecia totalis, congenital alopecia universalis, congenital alopecia and severe T-cell immunodeficiency can be treated with compounds and severe T-cell immunodeficiency can be treated with compounds compounds that can be used to inhibit hair growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            553

The invention discloses a new catalytic DNA or RNA molecule that

specifically cleaves, or inhibits expression of, Hairless Protein mRNA
which comprises a catalytic domain that cleaves mRNA at a defined

consensus sequence and binding domains contiguous with the 5' and 3' ends

consensus sequence and binding domains contiguous with the 5' and 3'

consensus sequence and binding domains contiguous with the 5' and 3'

confidence and binding domains contiguous of hair, known as

a trichia. Abundant hair growth, hirsutism, can be improved by inhibiting

the genes promoting hair growth, and one way to get targeted, transient

continuing ribozymes and DNAzymes. Ribozymes are RNA structures which have

concluding ribozymes and DNAzymes. Ribozymes are RNA structures which have

continuing ribozymes and DNAzymes. Ribozymes are RNA structure to the

hammerhead ribozyme, called deoxy-ribozymes on DNAzymes, having a

cotallytic core and two sequence specific arms. The deoxy-ribozymes have

cotallytic core and two sequence specific arms. The deoxy-ribozymes have

cotallytic core and two sequence specific arms. The deoxy-ribozymes have

cotallytic core and two sequence specific arms. The deoxy-ribozymes have

cotallytic core and two sequence specific arms. The deoxy-ribozymes have

cotallytic ore and two sequence specific arms. The deoxy-ribozymes have

cotally a hair-producing cell, for inhibiting hair growth and for inhibiting

cotal by a hair-producing cell, for inhibiting hair growth and for inhibiting

the transition of a hair follicle from the anagen phase to the catagen

cotal removal products which function by inhibiting hairless protein

cotal removal products which function by inhibiting hairless protein

cotal removal products which function by inhibiting hairless protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 STVMHQAWAKFDIRGHCFCQVDARVWAPGDGGQQKEPTEKTPPTPQPSCNGDSNRTKDIK 239
                                                                                                                                                                                                                                     New catalytic nucleic acid molecule that specifically cleaves Hairless Protein mRNA, useful for inhibiting hair production by a hair-producing cell, or for inhibiting transition of a hair follicle from anagen phase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CSHCSHRLCVACGRIAGAGKNREKTGSQEQHTDDCAQEAGHAACSLILTQFVSSQALAEL

  relates to the Hairless expression constructs which may be used in transcription assays. Sequences of the invention are used in diagnosis and treatment of dermatological conditions such as hair loss. They are also used in gene therapy. Polynucleotides of the invention can be used as probes for the detection of hair loss. The present sequence is human Hairless protein (Hr)
                                                                                                                                                                                                                                                                                             STAMHQVWVKFDIRGHCPCQADARVWAPGDAGQQKESTQKTPPTPQPSCNGDTHRTKSIK

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to human Hairless (Hr) polypeptides and nucleic acid molecules (HR) encoding such polypeptides. The invention also relates to the Hairless expression constructs which may be used in transcription assays. Sequences of the invention are used in diagnosis and treatment of dermatological conditions such as hair loss. They are also used in gene therapy. Polynucleotides of the invention can be used as probes for the detection of hair loss. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                        || |||||| || || || || || |||||||| ||||| || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || || ||

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a human hairless (HR) polynucleotide encoding the hairless (Hr) polypeptide. The invention also relates to an expression sometruct which produces a polypeptide with hairless transcription factor activity, a reporter construct comprising a transcription regulatory region responsive to hairless transcription activity to regulatory region responsive to gene which is mediated by the transcription requlatory region and methods of screening for chemical agents which modulate hairless-mediated transcription, binding between hairless and thyroid hormone receptor or hairless activity. The polynucleotide is useful as a probe or primer to quantitate cognate RNA and DNA within cells, which can be subsequently used to correlate hair growth or loss with hairless expression or hairless-regulated transcription. The amino acid sequence of hairless antigen can be used for preparing specific binding molecules (e.g. polyclonal or monoclonal antibodies) for monitoring protein expression, for affinity purification and for functional studies. The human hairless polymudaeotide, polypeptide or specific binding molecule may be used to identify and detect this genetic marker in family pedigrees, radiation hybrids or human-rodent somatic cell hybrids, and as an affinity tag to identify, isolate and detect interacting proteins that bind the hairless construction. This sequence represents a human hairless polypeptide of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    EETPDSTESPAEDGAGRSPLPCPSLCELLASTAVKLCLGHDRIHWAFAPVTPALPSDDRI 299

The invention relates to a human hairless (HR) polynucleotide encoding the hairless (Hr) polypeptide. The invention also relates to an expression system compitating an expression construct which produces a polypeptide with hairless transcription factor activity, a reporter construct comprising a transcription factor activity, a reporter construct comprising a transcription regulatory region responsive to hairless transcription activity to regulatory region responsive to gene which is mediated by the transcription regulatory region and methods of screening for chemical agents which modulate hairless-mediated cranscription, binding between hairless and thyroid hormone receptor or hairless activity. The polynucleotide is useful as a probe or primer to cused to correlate hair growth or loss with hairless expression or hairless regulated transcription. The amino acid sequence of hairless antigen can be used for preparing specific binding molecules (e.g. colynucleotide, polypeptide or specific binding molecules (e.g. colynucleotide, polypeptide or specific binding molecule may be used to dentify and detect this genetic marker in family pedigrees, radiation hybrids or human-rodent somatic cell hybrids, and as an affinity tas to content or procein. This sequence represents a human hairless polypeptide of interacting proteins that bind the hairless contents and detect interacting a human hairless polypeptide of the represents a human hairless polypeptide of the represents a human hairless polypeptide of the represents and mental human hairless polypeptide of the represents and human hairless polypeptide of the represents and human hairless polypeptide of the represents and human hairless beliable to the represents and human hairless beliable to the represents and human hairless beliable to the represents and human hairless the hairless that human hairless the human hairless the human hairless the human hairless the human hairless the human hairless the human hairless the human hairless the human hairless the human hairl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New Hairless polypeptide and polynucleotide, useful for identifying and detecting this genetic marker in family pedigrees or human-rodent somatic cell hybrids, or detecting interacting proteins that bind hairless gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CSHCSHRLCVACGRIAGAGKNREKTGSQEQHTDDCAQEAGHAACSLILTQFVSSQALAEL 179

The invention relates to a human hairless (HR) polynucleotide encoding the hairless (Hr) polypeptide. The invention also relates to an expression construct which produces a polypeptide with hairless transcription factor activity, a reporter construct comprising a transcription regulatory region responsive to hairless transcription activity to regulatory region responsive to careful as mediated by the transcription regulatory region and methods of screening for chemical agents which modulate hairless-mediated receptor transcription, binding between hairless and thyroid hormone receptor or hairless activity. The polynucleotide is useful as a probe or primer to quantitate cognate RNA and DNA within cells, which can be subsequently used to correlate hair growth or loss with hairless expression or hairless-regulated transcription. The amino acid sequence of hairless antigen can be used for preparing specific binding molecules (e.g. polyclonal or monoclonal antibodies) for monitoring protein expression, for affinity purification and for functional studies. The human hairless polynucleotide, polypeptide or specific binding molecule may be used to identify, isolate and detect interacting proteins waiting to human-roadent sommatic cell hybrids, and as an affinity tag to identify, isolate and detect interacting proteins that bind the hairless gene or protein. This sequence represents a human hairless polypeptide of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                358
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   648
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   468
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New Hairless polypeptide and polynucleotide, useful for identifying and detecting this genetic marker in family pedigrees or human-rodent somatic cell hybrids, or detecting interacting proteins that bind hairless gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CSHCSHRLCVACGRIAGAGKNREKTGSQEQHTDDCAQEAGHAACSLILTQFVSSQALAEL 179
